

## **Pacific Northwest Environmental LLC - Description of Services**

Pacific Northwest Environmental LLC is a Service Disabled Veteran Owned Small Business (SDVOSB) with 25+ employees whose business focus is environmental services, asbestos, lead, mold, PCB abatement/remediation, selective demolition as well as HVAC system cleaning for industrial, institutional, residential, commercial and government buyers. Our gross average revenues were over \$3,000,000 over the last 3 years. Our bonding capability is in excess of \$1,000,000, and we are licensed, bonded and insured in multiple states. We are partnered with local Labor Union (s) to assure resource capacity.

Address: 19645 SE Sunnyside Rd., Damascus, OR 97089  
Phone: 503-218-2080  
DUNS: 831843326  
CAGE: 5PW41

## **Asbestos Removal**

Complete removal of asbestos containing building materials is mandatory prior to demolition or prior to any activity that might disturb material and cause a release of asbestos fibers into the air. Our team has the training, certifications, and experience to safely and properly abate any asbestos hazard.

- Surfacing Materials
- Wall and Ceiling Systems
- Roofing and Siding
- Thermal System Insulation
- Paints, Coatings, and Miscellaneous Waterproofing

## Asbestos Encapsulation

Encapsulation and management in place versus removal is occasionally the best short term solution for abating an asbestos hazard. We have access to a wide variety of products and solutions to encapsulate and manage asbestos material in place and create a safe work environment until full abatement can be undertaken.

- Penetrating Encapsulation for Stabilization of Asbestos Containing Materials.
- Bridging Encapsulants to create a Elastomeric Barrier over an Asbestos Containing Material.
- Rigid Barriers to create a more impermeable barrier over an Asbestos Containing Material or to restrict access to a hazardous area.

## Lead Paint Stabilization and Abatement

Lead based paint can pose serious environmental hazards when not properly abated or stabilized prior to demolition, repainting, or other activities that might disturb:

### Systems:

- Windows and Doors
- Casework / Millwork
- Interior and Exterior Walls and Ceilings
- Ornamental Iron and Metal Work

### Methods:

- Spot Removal for Structural Tie-in
- Component Removal
- Chemical and mechanical stripping
- Blasting

---

## Lead and Heavy Metal Decontamination

Exposure to lead and heavy metals can pose a serious health threat to those exposed to them. Lead, mercury, chromium are just a few examples of materials commonly found in industrial and commercial settings.

- Industrial Settings
- Firing Ranges
- Electronics Manufacturing
- Printing Operations
- Painting and Coating Operations

Proper removal of these materials and decontamination of the underlying surface is imperative in providing a safe work environment for occupants of any facility.

---

## Mold Remediation

Although naturally occurring, many molds and mildews can have a toxic effect on the human body. Serious indoor air quality problems occur when hazardous mold is left untreated. Furthermore improper remediation can actually make the situation much worse. With our experience in utilizing proper engineering controls for asbestos abatement, we can safely remediate most mold problems and create a better indoor air environment.

- Full isolation of contaminated area.
- Source removal of mold impacted building materials.
- Thorough cleaning and sanitizing of surfaces.
- Treating and sealing to inhibit future mold growth.

---

## HVAC System Cleaning and Restoration

Indoor air quality is becoming a major issue in buildings and homes across the county. We provide HVAC system cleaning and restoration services through our relationship with a nationally recognized air duct cleaning and restoration network. Our services meet or exceed the standards set forth by the National Air Duct Cleaners Association (NADCA), Air Conditioning Contractors Association (ACA), and Indoor Air Quality Association (IAQA).

- Complete isolation of HVAC System during Cleaning
- HEPA Filtered Local Collection of all Dust
- Full Contact Cleaning
- Repair or replacement of linings and damaged components
- All work overseen by NADCA Certified ASCS (Air System Cleaning Specialists)
- Full Photo Documentation of Pre and Post Cleaning Conditions

## Selective Demolition

Our team has the experience and resources to provide selective interior and exterior demolition to facility remodeling and renovation. Selective demolition is also useful in meeting recycling goals for Green Demolition Projects. We will often work in conjunction with heavy demolition contractors to provide selective demolition to enable the to meet recycling goals on “Green Demolition Projects’.

- Wall and Ceiling Systems
- HVAC and Electrical Systems
- Roofing Systems
- Floor Coverings and Flooring Systems
- Insulation Removal

In addition, combining our expertise in utilizing engineering controls for hazardous materials abatement, we can provide nearly dust free demolition in sensitive environments such as:

- Hospitals
- Occupied Buildings
- Clean Rooms
- Other Dust Sensitive Environments
